

COURSE OUTLINE  
**MATH 532: ALGEBRAIC GEOMETRY I**  
**TERM 2, 2015-16**

TIME AND LOCATION

MWF 12-1 in MATX 1118

INSTRUCTOR

Clemens Koppensteiner  
MATH 111  
clemens@math.ubc.ca  
Office hours: TBA

COURSE WEBSITE

COURSE OUTLINE

Algebraic geometry is – depending on one’s viewpoint – either the study of geometric objects by algebraic means, or the study of systems of polynomial equations by geometric means. This course is intended to be a first introduction to the subject. The goal is to prepare students to take more advanced courses in algebraic geometry. We will study the basic objects of algebraic geometry, algebraic varieties and schemes, as well as the morphisms between these objects. The course will loosely follow the lecture notes [G1], where we hope to cover chapters 1 to 6.

PREREQUISITES

A one year graduate course in algebra is certainly highly desirable. In particular, we will need a good understanding of commutative algebra. Some graduate-level (or advanced undergraduate) knowledge of topology or differential geometry is helpful, but not strictly necessary.

## GRADING

There will be sporadic homework assignments and a final project. The final grade will be based half on the homework and half on the project.

## REFERENCES

Below are some books which might be useful as a complement to Gathmann's notes. There is also an updated version of the first part of Gathmann's notes [G2].
